Air Cooled Heat Exchangers (ACHE)

Air cooled heat exchangers, or Fin Fan exchangers, are used when water is unavailable or ambient temperatures suffice. They offer a simpler solution than water-cooled systems, which require additional equipment like pumps and cooling towers, increasing costs and maintenance needs.

Did You Know?

- Almost every (power) plant has ACHE's
- ACHE's usually don't show up in IIR data
- Individual units from a series can be isolated and repaired
- Very difficult to reach Tube Sheet through Plug Sheet "At Depth"

Pop-A-Plug® Tube Plugs... the best solution for plugging ACHE Units

- Fast, safe and permanent – no welding, no hammering
- Our new [Smart Ram ACHE Adapter](#) is custom-tailored for use in ACHE units
- Safe and effective tube plugging solution for over 50 years

How an Air Cooler Works (video)
