

DYK #8: GripTight OD Test Plug

Did You Know... that our ODGT leaves no gripper marks inside the pipe? Some customers have concerns with gripper marks being left inside, and our Outer Diameter GripTight (ODGT) completely eliminates this concern as it grips around the OD of the pipe. Other customers have concerns about the entirety of the pipe being wetted, and the ODGT eliminates this concern as well since the entire pipe is hydrotested with no unwetted portion at the end of the pipe.

Our Engineering team pulled together a resource showing the gripper marks left on the OD of the pipe, you can see it in the attached DC92628 document. I've also included a Literature Sheet and the Product Info Card for the ODGT as additional resources. If you have any questions or comments about the ODGT, or want to share a success story, please let me know!

As always, happy hunting and stay hungry.
